

SpotCure-B6 High Power UV LED Cure System

Features:

- Ultra-High UV LED output
- Virtually no output heat
- LED output substantially safer than traditional halogen guns
- Automatic timed curing cycle
- Large 12mm diameter stainless steel curing probe
- Automatic "hands-free" infrared sensor activation
- Optional footswitch or PLC control
- Clear audible signal at start and end of cycle
- Output Power: 1 Watt/cm²@365nm
- Optional 405nm and 460nm curing probes
- Can operate continuously for heavy duty applications

You may want to put all of your halogen UV cure guns in the closet!

This system cures deeper and faster with virtually no output heat compared to halogen guns. And when you consider how much less power is required to operate this unit, and the fact that LEDs last for thousands of hours compared to a halogen lamp, you're going to save a lot of money by switching over.

SpotCure-B6 is designed with operator convenience in mind. The unit turns ON automatically 1.5 seconds after it is removed from the base unit, and remains on until the selected time has elapsed. An audible signal alerts the operator when time has expired. SpotCure-B6 can also be operated by an optional footswitch or PLC control. Times are easily selectable in 10 second increments up to 60 seconds.

And curing probes are interchangeable. Need to change wavelength? Just plug in a new curing probe.

No lamps to replace - No light guides to degrade

Zero cost of ownership!
